

Adding milk drinks · functions → components

The same revision continues into hardware. Existing function rows come first; the five new milk functions follow. Row priorities are recalculated from the revised needs → functions stage, preserving full precision.

Functions · redeployed priorities → Existing and new components		Rel. %	Water tank and refill interface	~ Coffee heater and coordinated thermal sensing	Pump and pressure-limiting path	Flowmeter and water circuit	Dose chamber, opener, and seals	Sealed dose and barrier packaging	Coffee outlet and cup support	~ Drip tray, dose container, and rinse capacity	~ Controller, milk sequence, and cleaning interface	~ Housing, steam protection, and shared power budget	+ Refrigerated milk reservoir and sensor	+ Milk pump, valves, and removable tubing	+ Steam generator and thermal protection	+ Steam–milk mixer and outlet
~ Store water for consecutive drinks	3.7	●				△					△	△

Changed

Reuse still requires redesign. The controller coordinates brewing, cooling, steaming, and cleaning; the housing carries the shared power and protection requirements; the tray collects milk-rinse waste. Yellow weights can change through priority normalization even when a row’s relationships stay unchanged.
