

Adding milk drinks · needs → functions

Before: the capsule-coffee machine. After: an integrated refrigerated milk supply and automatic steaming/frothing. Read each existing need across its new relationships, then the two new needs at the bottom. All judgments remain provisional.

Existing needs still apply. Milk changes taste, drink temperature, throughput, cleanup, footprint, and safety. Grounds preservation stays unchanged. Strong relationships identify design responsibility, not proof of improvement. The roof records proposed heating/power and cold/hot integration tensions.
